SUMMARY

Data Analyst with hands-on experience in **SQL, Excel, Power BI, and Python** to analyze large datasets and generate actionable business insights. Strong in **data cleaning, exploratory data analysis (EDA), KPI tracking, and dashboard creation**. Proven ability to translate raw data into clear insights that support business and decision-making teams.

TECHNICAL SKILLS

Databases & Querying : SQL (Select, Joins, Where, Group by, Aggregations, Subqueries)
Data Analysis & Visualization : Power BI (Interactive Dashboards, DAX Basics , KPIs)
Excel : Pivot Tables, Power Query, Advanced Formulas
Programming : Python (Pandas, NumPy, Data Cleaning, EDA)

PROJECTS

Turkish Retail Sales Analysis — SQL (MySQL)

- Analyzed ~19.4M retail transaction records (2017–2019) using MySQL to uncover revenue, pricing, and demand trends.
- Designed sales fact table schema and indexing strategy to optimize analytical queries on high-volume data.
- Performed data validation including date coverage checks, duplicate detection, and null analysis to ensure data integrity.
- Addressed performance constraints using indexing, date-based filtering, and batch data imports instead of GUI-based loading.

Superstore Sales Analysis – Power BI & SQL

- Analyzed 10,000+ sales records to identify regional performance trends, product-level profitability, and seasonal demand patterns.
- Built Power BI dashboards with key KPIs (sales, profit, growth %) to support management decision-making.
- Identified underperforming categories and regions, helping simulate data-driven business actions.
- Reduced manual reporting effort by ~40% through automated dashboards.

Credit Card Customer Analysis – Python & Excel

- Performed exploratory data analysis on 8,900+ customer records to understand spending behaviour and usage patterns.
- Cleaned and prepared datasets using Python and Excel to ensure analytical accuracy.
- Segmented customers into meaningful groups to support targeted business insights and reporting.
- Presented insights in a simplified format suitable for non-technical stakeholders.

ANALYTICAL IMPACT

- Translated raw datasets into clear insights and dashboards for business understanding.
- Identified trends, patterns, and performance gaps using SQL, Excel, and Power BI.
- Improved data reliability through structured cleaning, validation, and EDA techniques.
- Supported KPI tracking and performance monitoring through interactive dashboards

EDUCATION

Bachelor of Accounting & Finance, Mumbai University — 2025

CERTIFICATIONS

- Post Graduate Program in Data Science & Analytics — *Imarticus Learning (Pursuing)*
- Advanced Excel — MKCL
